

of the United States in the region and threaten vital interests of the national security, foreign policy, and economy of the United States. For these reasons, I have determined that I must continue the declaration of national emergency with respect to Iran necessary to maintain comprehensive sanctions against Iran to respond to this threat.

**Message to the Congress  
Transmitting a Report on the  
National Emergency With Respect  
to Iran**

*March 13, 2001*

*To the Congress of the United States:*

As required by section 401(c) of the National Emergencies Act, 50 U.S.C. 1641(c), section 204(c) of the International Emergency Economic Powers Act, 50 U.S.C. 1703(c), and section 505(c) of the International Security and Development Cooperation Act of 1985, 22 U.S.C. 2349aa-9(c), I transmit herewith a 6-month periodic report on the national emergency with respect to Iran that was declared in Executive Order 12957 of March 15, 1995.

**Letter to Members of the Senate on  
the Kyoto Protocol on Climate  
Change**

*March 13, 2001*

*Dear \_\_\_\_\_:*

Thank you for your letter of March 6, 2001, asking for the Administration's views on global climate change, in particular the Kyoto Protocol and efforts to regulate carbon dioxide under the Clean Air Act. My Administration takes the issue of global climate change very seriously.

As you know, I oppose the Kyoto Protocol because it exempts 80 percent of the world, including major population centers such as

China and India, from compliance, and would cause serious harm to the U.S. economy. The Senate's vote, 95-0, shows that there is a clear consensus that the Kyoto Protocol is an unfair and ineffective means of addressing global climate change concerns.

As you also know, I support a comprehensive and balanced national energy policy that takes into account the importance of improving air quality. Consistent with this balanced approach, I intend to work with the Congress on a multipollutant strategy to require power plants to reduce emissions of sulfur dioxide, nitrogen oxides, and mercury. Any such strategy would include phasing in reductions over a reasonable period of time, providing regulatory certainty, and offering market-based incentives to help industry meet the targets. I do not believe, however, that the government should impose on power plants mandatory emissions reductions for carbon dioxide, which is not a "pollutant" under the Clean Air Act.

A recently released Department of Energy Report, "Analysis of Strategies for Reducing Multiple Emissions from Power Plants," concluded that including caps on carbon dioxide emissions as part of a multiple emissions strategy would lead to an even more dramatic shift from coal to natural gas for electric power generation and significantly higher electricity prices compared to scenarios in which only sulfur dioxide and nitrogen oxides were reduced.

This is important new information that warrants a reevaluation, especially at a time of rising energy prices and a serious energy shortage. Coal generates more than half of America's electricity supply. At a time when California has already experienced energy shortages, and other Western states are worried about price and availability of energy this summer, we must be very careful not to take actions that could harm consumers. This is especially true given the incomplete state of scientific knowledge of the causes of, and solutions to, global climate change and the lack of commercially available technologies for removing and storing carbon dioxide.

Consistent with these concerns, we will continue to fully examine global climate
